### Beautiful Brains National Geographic Answer

The first full series of scans of the developing adolescent brain—a National Institutes of Health (NIH) project that studied over a hundred young people as they grew up during the 1990s—showed that our brains undergo a massive reorganization between our 12th and 25th years. The brain doesn't actually grow very much during this period.

First Study There was a study done at the National Institutes of Health that showed how influential the adolescence stage is for maturation. The study showed that people do the most developing from ages 12-25. In this stage of life we learn to adapt to having more responsibility.

### Beautiful Brains by David dobbs by Sheena McGillivray

Your brain contains about 100 billion microscopic cells called neurons. There are so many, it would take you over 3,000 years to count them all! Whenever you dream, laugh, think, see or move, it's because minute chemical and electrical signals are racing between these neurons along billions of tiny neuron pathways.
