### **CDC | Bioterrorism**

Bioterrorism agents are living organisms, such as bacteria, viruses, or fungi, or toxins that are deliberately used to sicken and kill.

### **Bioterrorism Agents | Lab Tests Online**

Bioterrorism agents can be separated into three categories, depending on how easily they can be spread and the severity of illness or death they cause. Category A agents are considered the highest risk and Category C agents are those that are considered emerging threats for disease.

### **Bioterrorism Diseases - Minnesota Dept. of Health**

A biological attack, or bioterrorism (BT), is the intentional release of viruses, bacteria, or other germs that can sicken or kill people. Bacillus anthracis, the bacteria that causes anthrax, is one of the most likely agents to be used in a biological attack. Anthrax is one of the most likely agents to be used because:
