An excellent example of ratio data is the measurement of heights. Height could be measured in centimeters, meters, inches, or feet. It is not possible to have a negative height. When comparing to interval data, for example, the temperature can be - 10-degree Celsius, but height cannot be negative, as stated above.

Ratio Data: Definition, Characteristics and Examples ...

The examples so far have been "part-to-part" (comparing one part to another part). But a ratio can also show a part compared to the whole lot. Example: There are 5 pups, 2 are boys, and 3 are girls

Ratios - MATH

Let us take a look at some examples: Question: In a mixture of 45 litres, the ratio of sugar solution to salt solution is 1:2. What is the amount of sugar solution to be added if the ratio has to be 2:1? Answer: Number of litres of sugar solution in the mixture = $(1/(1+2)) * 45 = 15$ litres. So, 45-15 = 30 litres of salt solution is present in it.
